

Micron Q4 2025 Earnings

Blind Sentiment & Directional Score: Outlook/guidance only

David Eji

August 3, 2026

Conventions (sealed before reading)

- **Outputs (exactly four):** sentiment score $\in [-1, +1]$, directional signal $\in \{\text{BUY, HOLD, SELL}\}$, structured summary, evidence quotes.
- **HOLD band:** $|\text{overnight move}| < 2.00\%$. Above $+2.00\%$, BUY is correct. Below -2.00% , SELL is correct.
- **Timing rule:** The company releases after the market close. The overnight move is defined as $(\text{next-trading-day Open} \div \text{release-day Close}) - 1$, applied identically to every report.
- **Price source:** Yahoo Finance daily OHLC pulled via the `yfinance` Python library.
- **Info-source experiment:** this read uses **Outlook/guidance only** as the **ONLY** report content. The other sections (the reported financial results, the earnings call Q&A) are withheld by design. Sources rotate across companies, so each company reads each source exactly once and each quarter slot contains two of each source.
- **Research:** Google is allowed for pre-release context (definitions, prior-quarter framing, analyst expectations going into the print). Not allowed before sealing: the withheld sections, the stock's price action after the release, after-hours quotes, or post-call analyst takes.
- **Pre-registered metrics:** the primary metric is the Information Coefficient (correlation between the sentiment score and the realised move); the BUY/HOLD/SELL labels are additionally scored with the Matthews Correlation Coefficient (MCC), where guessing the most common label scores zero. Both fixed in advance; no new metrics after seeing results.
- **Horizons:** returns are recorded at overnight, 1, 3, 5, 10 and 20 trading days to locate where the signal lives. The $\pm 2.00\%$ band applies to the overnight move only.

Your scoring: fill in below, then seal

1 Sentiment score

Score: +0.55

Rationale. Sequential revenue growth of over a billion dollars with gross margin guided through 50% and EPS above \$3.75 is a memory upcycle guide with real operating leverage.

2 Directional signal

Signal: BUY

Rationale. Margin crossing 50% on rising volume is the classic signal of a tightening memory market. BUY.

3 Structured summary

- **What the source shows.** Guidance implies both volume and pricing working in the same direction.
- **What the source cannot show.** No reported quarter or Q&A, so cannot hear how durable management thinks this is.
- **Expectations bar.** For a cyclical, a guide this strong usually beats a market braced for the cycle turning.
- **Conviction.** Moderate-high conviction: the margin trajectory is unambiguous in this source.

4 Evidence quotes

1. Fiscal Q1 2026 revenue guided to \$12.50B plus or minus \$300M, against \$11.32B in the quarter just reported.
2. Non-GAAP gross margin guided to 51.5% plus or minus 1.0% (GAAP 50.5% plus or minus 1.0%), crossing above 50%.
3. Non-GAAP diluted EPS guided to \$3.75 plus or minus \$0.15 (GAAP \$3.56 plus or minus \$0.15).

Overnight move and call verification

MU close, 23 September 2025 (release day)	\$166.41
MU open, 24 September 2025	\$165.08
Overnight move	−0.80%

Call verification

- HOLD band test: $|-0.80\%| < 2.00\%$, inside the band, so HOLD territory.
- Sign test: The move is inside the band, so the correct directional call is **HOLD**.
- Score given vs. correct call: signal was **BUY**, correct call **HOLD**, so **INCORRECT**.

Horizon returns (pre-registered)

For the Information Coefficient. Returns measured from the same baseline close used for the overnight move, at fixed trading-day horizons, from the single price source (yfinance). Filled only after sealing.
