

# Shell Q3 2025

Human Arm Reading Sheet, Outlook and guidance only

David Eji, rater offset A

August 10, 2026

## The rules, agreed before any of this was scored

- **What counts as a HOLD.** If the share price moves less than 2% overnight, that counts as no real move. Further out the band widens, because over several days a stock drifts anyway, and we set it so roughly the same share of events still count as HOLD.
- **Write a score, not a decision.** You give a number. The sheet turns it into BUY, HOLD or SELL for you: anything between  $-0.20$  and  $+0.20$  is a HOLD, above that a BUY, below it a SELL. Do not work it out yourself, or the rule stops being fixed in advance.
- **Do not look at the price until your score is sealed.** If you see one by accident, say so in the peeked box. Owning up costs us one event. Hiding it costs us the whole result.
- **Time yourself.** How long a read takes is half of what we are measuring, since the point is to compare it against what the model costs.
- **If you used AI at any point, write it down.**
- **When this one came out.** Shell reports before the market opens, so we measure from the previous day's closing price to that morning's opening price.
- **Once you seal the first read, leave it alone.** Do not go back and tidy it up after the second read. That is the one thing there is no fixing later.

## What you are reading

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| Reference          | SHEL-20251030                                               |
| Company            | Shell plc                                                   |
| Ticker             | SHEL                                                        |
| Quarter            | Q3 2025                                                     |
| Reported on        | 30 October 2025                                             |
| Which part you get | <b>guidance</b>                                             |
| Where to find it   | <a href="#">Shell Q3 2025 results and quarterly outlook</a> |
| How to read it     | Cold. No charts, no news, no previews, no price screen.     |

---

## Your hunch, written once per company before you start

*One line, written before you open anything: what do you think actually moves this stock? Writing it down first turns a hunch into something you can be proved wrong about, rather than an explanation you reach for afterwards.*

Trading and the buyback pace move this more than the upstream numbers do.

---

## FIRST READ, Outlook and guidance only

---

**What to read.** Read only what management says about what is coming: next quarter's guidance, full-year targets, spending plans. Skip the results for the quarter just gone, and skip the Q&A.

### Timer

Start timing before you open anything. Stop when the score is written down.

|                    |    |
|--------------------|----|
| minutes taken      | 21 |
| saw a price first? | no |
| used AI?           | no |

### Your score

**Score: +0.05**

**Call: HOLD** *(worked out by the formula)*

*Why.* Outlook is routine. Maintenance schedule and trading commentary in line with the usual quarterly note, with no change to the distribution policy.

|                                                  |
|--------------------------------------------------|
| <b>FIRST READ SEALED, do not come back to it</b> |
|--------------------------------------------------|

---

### SECOND READ, the whole document

---

**What to read.** Now open the whole thing and read all of it, including the parts held back from the first read. Start the timer again.

|               |    |
|---------------|----|
| minutes taken | 26 |
|---------------|----|

### Your score, second time

**Score: +0.00**

**Call: HOLD** *(worked out by the formula)*

*Why.* Unchanged. Nothing in the full document argues against a neutral read.

|                           |
|---------------------------|
| <b>SECOND READ SEALED</b> |
|---------------------------|

---

### What the market did, only once everything above is sealed

---

*These come from the shared price data rather than from you. Do check the overnight number against a chart once for this company though. A company reporting before the open is measured from the previous day's close; one reporting after the close is measured from that day's close. Getting it the wrong way round flips the answer.*

|                     | Raw    | Excess | Band  | P1 holds   | P2 holds |
|---------------------|--------|--------|-------|------------|----------|
| anchor date         |        |        |       | 29 October | 2025     |
| baseline close (\$) |        |        |       |            | \$75.55  |
| reaction open (\$)  |        |        |       |            | \$75.59  |
| Overnight           | +0.05% | +0.56% | 2.00% | yes        | yes      |
| D+3                 | −1.54% | −0.95% | 3.94% | yes        | yes      |
| D+5                 | −1.24% | +0.18% | 5.20% | yes        | yes      |
| D+10                | +1.14% | +1.72% | 5.20% | yes        | yes      |

*The band widens further out because a stock drifts over several days whatever the earnings said. Each one is set so roughly the same share of events still count as HOLD. These are fitted on twenty events, so treat them as rough and redo them once everyone's readings are pooled.*

### How the calls did

- Did it move more than 2% overnight? It moved +0.05%, so no, that is inside the band
- So the right call was: **HOLD**
- First read: **RIGHT**      Second read: **RIGHT**
- Did the second read change the call? No. The extra reading nudged the score but the call stayed the same.

*The second read is not independent of the first, since a call had already been committed to and people rarely talk themselves out of one. Read any flip as a floor on how much the extra material actually mattered, not a measure of it.*
