

Shell Q4 2025

Human Arm Reading Sheet, Earnings call Q&A only

David Eji, rater offset A

August 10, 2026

The rules, agreed before any of this was scored

- **What counts as a HOLD.** If the share price moves less than 2% overnight, that counts as no real move. Further out the band widens, because over several days a stock drifts anyway, and we set it so roughly the same share of events still count as HOLD.
- **Write a score, not a decision.** You give a number. The sheet turns it into BUY, HOLD or SELL for you: anything between -0.20 and $+0.20$ is a HOLD, above that a BUY, below it a SELL. Do not work it out yourself, or the rule stops being fixed in advance.
- **Do not look at the price until your score is sealed.** If you see one by accident, say so in the peeked box. Owning up costs us one event. Hiding it costs us the whole result.
- **Time yourself.** How long a read takes is half of what we are measuring, since the point is to compare it against what the model costs.
- **If you used AI at any point, write it down.**
- **When this one came out.** Shell reports before the market opens, so we measure from the previous day's closing price to that morning's opening price.
- **Once you seal the first read, leave it alone.** Do not go back and tidy it up after the second read. That is the one thing there is no fixing later.

What you are reading

Reference	SHEL-20260205
Company	Shell plc
Ticker	SHEL
Quarter	Q4 2025
Reported on	5 February 2026
Which part you get	qanda
Where to find it	Shell Q4 2025 earnings call transcript
How to read it	Cold. No charts, no news, no previews, no price screen.

Your hunch, written once per company before you start

One line, written before you open anything: what do you think actually moves this stock? Writing it down first turns a hunch into something you can be proved wrong about, rather than an explanation you reach for afterwards.

Trading and the buyback pace move this more than the upstream numbers do.

FIRST READ, Earnings call Q&A only

What to read. Read only the analysts' questions and the answers they get. Skip the scripted remarks at the start, and skip the numbers.

Timer

Start timing before you open anything. Stop when the score is written down.

minutes taken	25
saw a price first?	no
used AI?	no

Your score

Score: -0.10

Call: HOLD *(worked out by the formula)*

Why. Q&A is more defensive than usual, with repeated questions on chemicals and the pace of buybacks that management does not fully answer.

FIRST READ SEALED, do not come back to it

SECOND READ, the whole document

What to read. Now open the whole thing and read all of it, including the parts held back from the first read. Start the timer again.

minutes taken	30
---------------	----

Your score, second time

Score: -0.25

Call: SELL *(worked out by the formula)*

Why. Flipped to SELL. The results show the chemicals weakness the Q&A was circling, and the buyback pace does slow.

SECOND READ SEALED

What the market did, only once everything above is sealed

These come from the shared price data rather than from you. Do check the overnight number against a chart once for this company though. A company reporting before the open is measured from the previous day's close; one reporting after the close is measured from that day's close. Getting it the wrong way round flips the answer.

	Raw	Excess	Band	P1 holds	P2 holds
anchor date				4 February 2026	
baseline close (\$)					\$78.79
reaction open (\$)					\$76.29
Overnight	-3.17%	-2.41%	2.00%	no	yes
D+3	-1.26%	-2.39%	3.94%	yes	no
D+5	+1.83%	+0.99%	5.20%	yes	no
D+10	+2.02%	+2.27%	5.20%	yes	no

The band widens further out because a stock drifts over several days whatever the earnings said. Each one is set so roughly the same share of events still count as HOLD. These are fitted on twenty events, so treat them as rough and redo them once everyone's readings are pooled.

How the calls did

- Did it move more than 2% overnight? It moved -3.17%, so yes, that is outside the band
- So the right call was: **SELL**
- First read: **WRONG** Second read: **RIGHT**
- Did the second read change the call? Yes, HOLD to SELL, and changing it HELPED.

The second read is not independent of the first, since a call had already been committed to and people rarely talk themselves out of one. Read any flip as a floor on how much the extra material actually mattered, not a measure of it.
