

Phase 3 - reading notes (Dragos)

Six companies, 23 events, 40 timed passes. Every score was sealed before any price was seen; no peeked flags on the set.

17 of the events are two-pass: one assigned section first, then the whole document, timed separately. That pairing is the point of the exercise - it measures what the rest of the document adds once the section has already been read. The other 6 were full-document only.

Scores are surprise, not quality: better or worse than what management had already led the market to expect.
