Region	YTD Aug '23	YTD Aug '25	CAGR	YTD Aug '25 % of total
Far East Asia	5.3	6.6	12%	29%

Gemini benefits above target | Strong volumes lift expected cost benefit to USD 720-950m annualised while delivering 90% reliability

Lever	Bunker	Asset turn	Terminals
Outcome	 8% bunker consumption improvement adjusted for capacity	 Volume growth outpaces capacity growth by ~1p.p.	 Increased throughput from additional volumes
HOW	Largest and most effective assets deployed more effectively Fewer and more efficient port calls Fit for purpose shuttle network rather than underutilized mainliners		Improved port moves per hour Expanded operating terminal capacity
Financial impact (USD)	Q3 2025A Estimated annual savings with full implementation and seasonality	Q3 2025A Estimated annual savings with full implementation and seasonality	Q3 2025A Estimated annual savings with full implementation and seasonality
	~135m ⁽¹⁾ 450-550m	~50m ⁽²⁾ 150-200m	~40m ⁽³⁾ 120-200m

Detailed calculation:

(1) Q3 '25 bunker consumption 90MT lower YoY worth USD 50m at 550 USD/T. Further, based on capacity growing 5.5% YoY, further consumption of 156MT was avoided, worth USD 86m at 550 USD/T. (2) Asset turn improvement of 1.5PP with volume growth of 7.0% (3,397k vs. 3,175k FFE) vs capacity growth of 5.5% (4,603k vs 4,362k TEU) at Total Network Cost (incl. Bunker) of USD 3,459m in Q3 '25. (3) Based on combined volume and margin effect of extra Gemini volume throughput at select APMT gateway terminals.
