

SHELL PLC

FOURTH QUARTER 2025 RESULTS

Wael Sawan, Chief Executive Officer of Shell PLC

Welcome everyone. Today, Sinead and I will present Shell's fourth quarter and full year 2025 results.

2025 was another year of consistent delivery and real progress. We continued to execute with discipline and delivered against our targets in service of becoming the world's leading integrated energy company.

As always, safety is a top priority. In 2025, four colleagues tragically lost their lives in our operated businesses. We owe it to them, and everyone who works with us, to learn from these incidents and to prevent such tragedies from happening again. On process safety, we continue to make encouraging progress with 30% fewer incidents in 2025 compared to the previous year. Improving personal and process safety is a continuous journey, and will remain our top priority.

Turning to our strategy of delivering more value with less emissions. Last year we beat our ambitious CMD23 targets – and set out important new financial targets at CMD25.

The first of these financial targets is to deliver structural cost reductions of 5 to 7 billion dollars by the end of 2028. By the end of 2025, we had already achieved 5.1 billion dollars of reductions, with more to come.

Nearly 60% of the structural cost reductions came from operational efficiencies, a leaner corporate centre, and faster value-based decision-making. Achieving this target 3 years early demonstrates the drive of our organisation to deliver.

The next target is disciplined capital allocation within a cash capex range of 20 to 22 billion dollars – and we ended 2025 in the middle of that range. This is about greater discipline and better capital allocation to enhance returns – and you see that reflected in tough choices like stopping the construction of the biofuels plant in Rotterdam.

The third is annual growth in normalised free cash flow per share of over 10% through 2030. We are on track to deliver through a focus on performance and discipline, by turning around underperforming capital – and we continue to focus on shareholder distributions through buybacks.

This brings me to the fourth financial target – shareholder distributions of 40 to 50% of CFFO through the cycle. This remains sacrosanct and in 2025 we delivered at the top end of that range.

In short, we are on track to achieve our financial targets, showing that we deliver on what we say we will do.

Now, turning to our portfolio. In 2025, we executed several deliberate, value-driven decisions to strengthen our businesses. In Upstream, we completed the divestment of SPDC in Nigeria – the conclusion of a major multi-year effort. We also completed the Adura joint venture in December – which, as of today, is the UK North Sea's largest independent producer and unlocks additional value. And finally, in Chemicals & Products, we divested our loss-making asset in Singapore and are working to reposition our Chemicals portfolio to unlock further value.

These decisive actions demonstrate our focus on value.

At our CMD25 we also set an aim of growing our LNG sales through to 2030 by 4 to 5% per annum – and last year, those sales grew by 11%, supported by the highest number of cargoes delivered in a single year. This record was supported by last year's start-up of LNG Canada, where ramp-up to full capacity is continuing. Beyond organic growth, we also completed the acquisition of Pavilion Energy last year.

We also committed to bring new oil and gas projects on line that – at their peak – will add more than 1 million barrels of oil equivalent per day by 2030. And we're progressing well. By the end of last year, we had already started up more than a quarter of that new production.

We have also further strengthened our deep-water position by increasing our interests in the Gulf of America, in Brazil and in Nigeria – and we took Final Investment Decisions for the Kaikias waterflood in the Gulf of America and for Gato do Mato, now renamed to Orca, in Brazil.

In addition, we have expanded our footprint for exploration, by acquiring acreage in Angola, South Africa, and the Gulf of America.

Moving now to Marketing, where we continue to high-grade our portfolio. Last year in Mobility, we closed or divested some 800 lower-performing branded sites. And by focusing on performance, discipline and simplification, both Mobility and Lubricants achieved their best-ever results in 2025.

And in Power and Low-carbon options, we've continued to high-grade the portfolio through the year, divesting projects like Atlantic Shores and ScotWind, while also diluting parts of the Savion portfolio. These steps are aligning our portfolio with our increased focus on flexible generation and trading.

Turning now to the less emissions part of our strategy. At CMD23, we said we would invest between 10 to 15 billion dollars in low-carbon energy solutions between 2023 and 2025 – which we have delivered on.

We have created options in Power and Low-carbon, in areas such as CCS and bio-energy. We're now focused on delivering returns on those investments, helping our customers to decarbonise and leveraging our trading capabilities.

Last year we also made significant progress against a number of our ETS24 emissions targets.

Starting with our target to halve Scope 1 and 2 emissions under our operational control by 2030, on a net basis compared with 2016 – we have already achieved some 70% of that target.

Next, our target to lower the net carbon intensity of the products we sell by 15 to 20% by 2030. We're on track, delivering 9% in 2025 compared with 2016. Linked to that, we also set an ambition to reduce customer emissions from the use of the oil products we sell by 15 to 20% by 2030 – and we met that ambition, achieving a reduction of 18% in 2025.

2025 was also the year we achieved our target of eliminating 100% of routine flaring from our Upstream operations – once again showing that we deliver on what we say.

With that, I will hand over to Sinead, who will tell you more about our financial results and our financial framework.

SINEAD GORMAN, CHIEF FINANCIAL OFFICER OF SHELL PLC

Thank you, Wael.

Our financial results in the fourth quarter of 2025 were lower, due to non-cash tax impacts and lower oil prices, which were partly offset by another quarter of strong operational performance.

Our Adjusted Earnings for the quarter were some 3.3 billion dollars.

Upstream delivered a strong quarter in the current price environment and as expected Integrated Gas results returned to more normal, pre-Covid levels as we have outlined in previous quarters.

Marketing results were seasonally lower and further impacted by non-cash tax adjustments in joint ventures.

Products delivered strong results, helped by higher refining margins, partly offset by lower trading, which is typical in the fourth quarter.

And in Chemicals, we continued to face challenges due to both low chemical margins and lower operational performance. Fixing and repositioning this business is a key priority in 2026.

Turning to cash, Q4 CFFO was robust as we generated 9.4 billion dollars, despite some of the typical year-end payments.

Moving to the 2025 full year. From a macro perspective, Brent prices on average were over 10 dollars a barrel lower than the year before. Despite this, we are proud that our stronger operational performance drove solid financial results in this lower price environment.

Full-year Adjusted Earnings were 18.5 billion dollars.

And we generated close to 43 billion dollars in cash flow from operations, and we delivered just over 26 billion dollars of free cash flow.

Both Integrated Gas and Upstream had a very strong year operationally, with high controllable availability driving increased production. In particular, we saw increased contributions from higher-margin Upstream volumes, especially in the Gulf of America and Brazil.

In Downstream and Renewables and Energy Solutions, Mobility and Lubricants delivered higher margins through increased sales of premium products whilst also reducing operating costs. As a result, both businesses continued to improve their ROACE year-over-year in 2025, with Mobility increasing to over 15% and Lubricants to over 21%, and with both achieving their highest-ever contributions to our results.

Chemicals & Products had a mixed year with better refining performance being offset by continued low chemical margins and lower trading and supply contributions.

While our Renewables and Energy Solutions business performed in line with expectations.

Now, moving to our financial framework.

Our cash capex range for 2026 remains at 20 to 22 billion dollars. We continue to maintain a strong balance sheet, with gearing of 21% or 9% excluding leases. And our distribution range of 40 to 50% of CFFO remains sacrosanct.

We continue to deliver compelling shareholder distributions, and today we announced a 4% increase in our dividend, in line with our progressive dividend policy, as well as a 3.5 billion dollar share buyback programme, which we expect to complete by our Q1 results

announcement in May. This marks the 17th consecutive quarter in which we've announced 3 billion dollars or more in buybacks.

And with that, I will hand back to Wael.

WAEEL SAWAN, CHIEF EXECUTIVE OFFICER OF SHELL PLC

Thank you Sinead.

Before closing out, I want to take a moment to thank our staff for their hard work, their commitment and their delivery across the year.

We are living in a rapidly changing world, but our business model is well positioned for these conditions.

That confidence is underpinned by our balance sheet strength, which we've improved in recent years through stronger operational performance and disciplined spending. This has led to enhanced cash generation.

We'll continue to focus on what we can control and ensure we are positioned for counter-cyclical opportunities where they might arise and meet our high bar for investment decisions.

Ultimately, we hope it's clear that you can be sure of Shell. You can trust us to stay value focused and disciplined.

We have entered 2026 as a more resilient organisation. We have raised the bar on operational performance. We are showing more discipline and making great progress to deliver more value with less emissions.

And there's so much more to come. Lower costs; further performance improvements supported by the transformative potential of AI, and a higher-returning portfolio of world-leading franchise businesses. All of this gives us confidence for the road ahead.

Thank you.

DEFINITIONS AND CAUTIONARY NOTE

The companies in which Shell plc directly and indirectly owns investments are separate legal entities. In this presentation “Shell”, “Shell Group” and “Group” are sometimes used for convenience to reference Shell plc and its subsidiaries in general. Likewise, the words “we”, “us” and “our” are also used to refer to Shell plc and its subsidiaries in general or to those who work for them. These terms are also used where no useful purpose is served by identifying the particular entity or entities. “Subsidiaries”, “Shell subsidiaries” and “Shell companies” as used in this presentation refer to entities over which Shell plc either directly or indirectly has control. The terms “joint venture”, “joint operations”, “joint arrangements”, and “associates” may also be used to refer to a commercial arrangement in which Shell has a direct or indirect ownership interest with one or more parties. The term “Shell interest” is used for convenience to indicate the direct and/or indirect ownership interest held by Shell in an entity or unincorporated joint arrangement, after exclusion of all third-party interest.

This presentation contains forward-looking statements (within the meaning of the U.S. Private Securities Litigation Reform Act of 1995) concerning the financial condition, results of operations and businesses of Shell. All statements other than statements of historical fact are, or may be deemed to be, forward-looking statements. Forward-looking statements are statements of future expectations that are based on management’s current expectations and assumptions and involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those expressed or implied in these statements. Forward-looking statements include, among other things, statements concerning the potential exposure of Shell to market risks and statements expressing management’s expectations, beliefs, estimates, forecasts, projections and assumptions. These forward-looking statements are identified by their use of terms and phrases such as “aim”; “ambition”; “anticipate”; “aspire”; “aspiration”; “believe”; “commit”; “commitment”; “could”; “desire”; “estimate”; “expect”; “goals”; “intend”; “may”; “milestones”; “objectives”; “outlook”; “plan”; “probably”; “project”; “risks”; “schedule”; “seek”; “should”; “target”; “vision”; “will”; “would” and similar terms and phrases. There are a number of factors that could affect the future operations of Shell and could cause those results to differ materially from those expressed in the forward-looking statements included in this presentation, including (without limitation): (a) price fluctuations in crude oil and natural gas; (b) changes in demand for Shell’s products; (c) currency fluctuations; (d) drilling and production results; (e) reserves estimates; (f) loss of market share and industry competition; (g) environmental and physical risks, including climate change; (h) risks associated with the identification of suitable potential acquisition properties and targets, and successful negotiation and completion of such transactions; (i) the risk of doing business in developing countries and countries subject to international sanctions; (j) legislative, judicial, fiscal and regulatory developments including tariffs and regulatory measures addressing climate change; (k) economic and financial market conditions in various countries and regions; (l) political risks, including the risks of expropriation and renegotiation of the terms of contracts with governmental entities, delays or advancements in the approval of projects and delays in the reimbursement for shared costs; (m) risks associated with the impact of pandemics, regional conflicts, such as the Russia-Ukraine war and the conflict in the Middle East, and a significant cyber security, data privacy or IT incident; (n) the pace of the energy transition; and (o) changes in trading conditions. No assurance is provided that future dividend payments will match or exceed previous dividend payments. All forward-looking statements contained in this presentation are expressly qualified in their entirety by the cautionary statements contained or referred to in this section. Readers should not place undue reliance on forward-looking statements. Additional risk factors that may affect future results are contained in Shell plc’s Form 20-F and amendment thereto for the year ended December 31, 2024 (available at www.shell.com/investors/news-and-filings/sec-filings.html and www.sec.gov). These risk factors also expressly qualify all forward-looking statements contained in this presentation and should be considered by the reader. Each forward-looking statement speaks only as of the date of this presentation, February 5, 2026. Neither Shell plc nor any of its subsidiaries undertake any obligation to publicly update or revise any forward-looking statement as a result of new information, future events or other information. In light of these risks, results could differ materially from those stated, implied or inferred from the forward-looking statements contained in this presentation.

Also, in this presentation we may refer to Shell’s “net carbon intensity” (NCI), which includes Shell’s carbon emissions from the production of our energy products, our suppliers’ carbon emissions in supplying energy for that production and our customers’ carbon emissions associated with their use of the energy products we sell. Shell’s NCI also includes the emissions associated with the production and use of energy products produced by others which Shell purchases for resale. Shell only controls its own emissions. The use of the terms Shell’s “net carbon intensity” or NCI is for convenience only and not intended to suggest these emissions are those of Shell plc or its subsidiaries.

Shell’s operating plan and outlook are forecasted for a three-year period and ten-year period, respectively, and are updated every year. They reflect the current economic environment and what we can reasonably expect to see over the next three and ten years. Accordingly, the outlook reflects our Scope 1, Scope 2 and NCI targets over the next ten years. However, Shell’s operating plan and outlook cannot reflect our 2050 net-zero emissions target, as this target is outside our planning period. Such future operating plans and outlooks could include changes to our portfolio, efficiency improvements and the use of carbon capture and storage and carbon credits. In the future, as society moves towards net-zero emissions, we expect Shell’s operating plans and outlooks to reflect this movement. However, if society is not net zero in 2050, as of today, there would be significant risk that Shell may not meet this target.

This presentation may contain certain forward-looking non-GAAP measures such as capital expenditure and divestments. We are unable to provide a reconciliation of these forward-looking non-GAAP measures to the most comparable GAAP financial measures because certain information needed to reconcile those non-GAAP measures to the most comparable GAAP financial measures is dependent on future events some of which are outside the control of Shell, such as oil and gas prices, interest rates and exchange rates. Moreover, estimating such GAAP measures with the required precision necessary to provide a meaningful reconciliation is extremely difficult and could not be accomplished without unreasonable effort. Non-GAAP measures in respect of future periods which cannot be reconciled to the most comparable GAAP financial measure are calculated in a manner which is consistent with the accounting policies applied in Shell plc’s consolidated financial statements.

The contents of websites referred to in this presentation do not form part of this presentation.

We may have used certain terms, such as resources, in this presentation that the United States Securities and Exchange Commission (SEC) strictly prohibits us from including in our filings with the SEC. Investors are urged to consider closely the disclosure in our Form 20-F and any amendment thereto, File No 1-32575, available on the SEC website www.sec.gov
